```python
import threading
import time
counter = 0
lock = threading.Lock()
def increment(thread_name):  2 usages
    global counter

    for i in range(5):
        lock.acquire()          # Locking the critical section

        temp = counter
        temp += 1
        time.sleep(0.1)
        counter = temp

        print(thread_name, "updated counter to", counter)

        lock.release()          # Releasing the lock
t1 = threading.Thread(target=increment, args=("Thread-1",))
t2 = threading.Thread(target=increment, args=("Thread-2",))
t1.start()
t2.start()
t1.join()
t2.join()

print("Final Counter Value =", counter)
```

```
Thread-1 updated counter to 1
Thread-2 updated counter to 2
Thread-1 updated counter to 3
Thread-2 updated counter to 4
Thread-1 updated counter to 5
Thread-2 updated counter to 6
Thread-1 updated counter to 7
Thread-2 updated counter to 8
Thread-1 updated counter to 9
Thread-2 updated counter to 10
Final Counter Value = 10

Process finished with exit code 0
